Christmas
2 Silver Blue

Install guide

Lock screen

Home screen

For iPhone, Samsung Galaxy
and other Android phones

What's inside

Christmas 2 Silver Blue is a midnight blue theme in silver and old gold: etched glass baubles, a snowman skating on a frozen lake, and silver charms. Every icon has a thin gold line round it, like a jewellery box.

There's no app to install. You get pictures and videos, and this guide shows where each one goes.

1. **Christmas-2-Silver-Blue_1-Icons.zip**
   54 icons in 5 colours, 7 characters and 5 blank, for iPhone and Android.
2. **Christmas-2-Silver-Blue_2-Wallpapers.zip**
   6 wallpapers for iPhone and Android.
3. **Christmas-2-Silver-Blue_3-Animated.zip**
   2 wallpapers that move, and clips for a Live Photo.
4. **Christmas-2-Silver-Blue_4-Widgets.zip**
   12 widget pictures and the colour codes.
5. **Christmas-2-Silver-Blue_Guide.pdf**
   This guide.

Start here

Get the files onto your phone p. 5
Everyone starts here

The wallpapers and the icons p. 8
What each file is for

iPhone p. 11

Samsung Galaxy p. 18

Other Android phones p. 22
Pixel, Xiaomi, Motorola, OnePlus and more

If something looks wrong p. 24

Tip

Wallpapers first. They take two minutes and already change the whole look.

Icons take longer, so start with the apps you open most. You don't have to use everything in the kit.

The colours

For when an app asks you for a colour: the clock on your lock screen, the text of a widget. They're also in the **Widgets** folder, in **colour-codes.txt**.

Midnight
#0B1D38

Silver
#90A9BB

Frost
#D4E5EA

Sky
#6EB7DF

Gold
#C9A35A

Paper
#F7FBFD

EVERYONE

Get the files

The Etsy app can't download files. Use a browser instead, like Safari or Chrome, on your phone or on a computer.

1. Go to **etsy.com** and sign in.
2. Open **Your account › Purchases**.
3. Next to this order, tap **Download Files**.
4. Tap each file to download it.

On screen
A page with the files of your order. On a phone they go to your Downloads folder.

Bought as a guest? The download link is in your receipt email.

Downloaded on a computer? Unzip the files there and send the folders to your phone with a cable, AirDrop or a cloud drive.

IPHONE

Unzip on iPhone

1. Open the **Files** app and go to **Downloads**. It's under **Browse**, in iCloud Drive or On My iPhone.
2. Tap a ZIP file. A folder with the same name appears next to it.
3. Open the folder to see what's inside.

Save pictures to Photos

Wallpapers, icons and widgets are easiest to pick from Photos.

4. In the folder, tap ••• then **Select**, and tap the pictures you want.
5. Tap **Share**, then **Save Images**. For a video it says **Save Video**.

On screen
The pictures at the top of your Photos library, in Recents.

SAMSUNG AND ANDROID

Unzip on Android

1. Open your files app. On Samsung it's called **My Files**; on most other phones, **Files**.
2. Go to **Downloads** and tap a ZIP file.
3. Tap **Extract**. When it asks for a folder name, keep it and tap **Extract** again. A folder with the same name appears.

On screen
After a moment, the pictures and videos show up in your Gallery or Photos app, in an album named after the folder.

Don't see them there? Open them straight from the files app. Every step in this guide that says "choose a picture" also lets you browse to it.

Tip
Unzip all the ZIP files now, so everything is ready when you need it.

The wallpapers

Use the iPhone folder on an iPhone and the Android folder on any other phone. Same pictures, two sizes.

1 2 3 4

1 etched-baubles.jpg

2 frozen-lake.jpg

3 silver-charms-midnight.jpg

4 silver-charms-frost.jpg

Tip

For the home screen, use the files ending in -home: the same picture a little darker at the bottom, so the names under your apps stay easy to read.

None of them has a time on it: your phone adds its own clock.

The icons

Each icon is named by what it shows: **chat.png**, **camera.png**, **phone.png**. Two sets of the same icons:

- **Icons-iPhone**: square, 1024 px. iOS rounds the corners itself.
- **Icons-Android**: die-cut stickers, 512 px.

Midnight, **Silver**, **Frost**, **Sky**, **Gold**: the same 54 icons in each colour

Characters: 7 stickers of the theme, like etched-bauble and silver-snowflake

Blank: plain stickers

ICONS

Icon ideas

There are no app logos in the kit, so here's what we'd use.

chat.png
Messages

chat-call.png
Messaging apps with calls

phone.png
Calls

retro-camera.png

Maps

The characters are for the apps you love most, or for a folder. For any other app, use a blank sticker.

CHAPTER

iPhone

Wallpapers p. 12

Icons p. 13

Moving lock screen p. 16

Widgets p. 17

Written for iOS 26. A newer iOS may name a button a little differently.

IPHONE

Wallpapers

1. Open **Settings › Wallpaper** and tap **Add New Wallpaper**.
2. Tap **Photos** and choose etched-baubles, or any other.
3. Tap the time to change its colour, so it reads well on the picture.
4. Tap **Add**, then **Set as Wallpaper Pair** to use the same picture on the home screen.
5. For the home screen, tap **Customize Home Screen** instead, then **Photos**, and choose a -home version, or another one.

Tip

If the home screen looks blurry, open its settings again and turn off **Blur**.

IPHONE

Icons

An iPhone can't change an app's icon. The Shortcuts app, which comes with every iPhone, makes a new icon that opens the app. It takes about a minute per app.

Before you start

1. Pick a colour folder, or mix them. A row in one colour looks calm; mixed, it looks like a sticker sheet.
2. Save the icons you want from **Icons-iPhone** to Photos (page 6). They'll be together at the top of Recents.
3. Set the icon style to **Default**: touch and hold an empty spot on the Home Screen, tap **Edit › Customize** and choose **Default**.

Good to know

Dark, Clear and Tinted can change the colours of your new icons. Default keeps them as drawn.

IPHONE

Make one icon

1. Open **Shortcuts** and tap **+** at the top right.
2. Search for **Open App** and tap it.
3. Tap the word **App** and choose the app, for example Messages.
4. Open the shortcut's details: tap its name at the top, or ••• and then ⓘ. Tap **Add to Home Screen**.
5. Tap the small icon under **Home Screen Name and Icon**, then **Choose Photo** (or **Choose File**), and pick chat.png.
6. Type the name you want under the icon, then tap **Add**.

On screen
Your new icon on the Home Screen. Tap it and the app opens.

IPHONE

Faster, and tidier

Go faster

- In Shortcuts, touch and hold a shortcut you made and tap **Duplicate**. Change the app and the picture, and add it again.
- Start with the 8 to 12 apps you use most. The others can stay in the App Library.

Hide the old icons

Touch and hold the app's own icon, tap **Remove App**, then **Remove from Home Screen**. The app stays on your phone and in the App Library. Don't delete it: your new icon needs it.

Good to know

Icons made with Shortcuts don't show notification badges, the little red numbers. For apps where you need them, keep the app's own icon too, for example in a folder.

Use the **Icons-iPhone** set: its icons are square on purpose, because iOS rounds them and a see-through corner would turn black.

IPHONE

Moving lock screen

iPhone can't use a video as wallpaper, but it can use a Live Photo. It moves for a moment when you wake the screen, then stays still. The full loop is for Samsung and Android.

1. In Files, open **Animated › iPhone-Live-Photo** and save a clip, like **etched-baubles-3s.mov**, to Photos (**Share › Save Video**).
2. Install a free app that turns a video into a Live Photo, like **intoLive**.
3. In that app, choose the clip, keep its whole length and save it as a Live Photo.
4. Go to **Settings › Wallpaper › Add New Wallpaper › Photos** and choose the new Live Photo.
5. Check that the Live Photo button at the bottom is on, then tap **Add**.

Good to know

If it says **Motion not available**, your iPhone won't move that Live Photo. Use the still picture of the same scene instead. Low Power Mode also stops the motion.

IPHONE

Widgets

The Widgets folder has pictures in three sizes. Their names start with small, medium or large. A photo widget app puts them on your Home Screen.

1. Save the widget pictures to Photos.
2. Install **Widgetsmith** or **Photo Widget** from the App Store. Both are free to download.
3. In the app, make a widget in the size you want, choose a photo for it, and pick the matching picture.
4. On the Home Screen, touch and hold an empty spot, then tap **Edit › Add Widget**.
5. Find the app, choose the same size and tap **Add Widget**.
6. Touch and hold the new widget, tap **Edit Widget** and choose the one you made.

CHAPTER

Samsung Galaxy

Written for One UI 7 and 8. A newer One UI may name a button a little differently.

Wallpapers

1. Open **Gallery** and find the Android wallpapers.
2. Open etched-baubles, tap ⋮ and then **Set as wallpaper**.
3. Choose **Lock screen** and tap **Done**.
4. Do the same with a -home version, or another picture, and choose **Home screen**.

Another way: touch and hold an empty spot on the Home screen, then **Wallpaper and style › Change wallpapers › Gallery**.

To recolour the clock, touch and hold the lock screen and tap the clock.

SAMSUNG GALAXY

Wallpapers that move

A Galaxy can use a video as wallpaper, no extra app needed. It plays without sound, and the loops have no seam.

Lock screen

1. Touch and hold the lock screen and unlock.
2. Tap **Wallpapers** at the top left, then **Gallery**.
3. Choose **Loops/etched-baubles-loop.mp4**, or another, and tap **Done**.
4. If you see **Trim**, keep the whole clip. Tap **Done**, then **Done** at the top right.

Home screen

5. Touch and hold an empty spot on the Home screen, then **Wallpaper and style › Change wallpapers › Gallery**, and choose a loop.

Good to know

Some models only take a video on the lock screen. If yours has no video option for the home screen, use a still wallpaper there.

Icons

Samsung's Home screen can't use your own pictures as icons. A launcher can: it's an app that takes over your Home screen, and you can switch back whenever you want. These steps work on any Android phone.

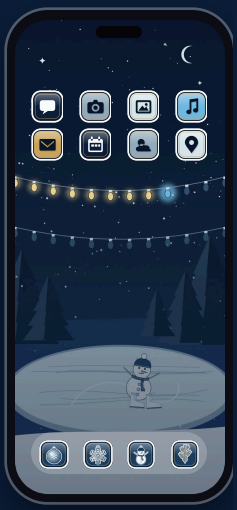

1. From Google Play, install a free launcher that lets you change an icon with a picture. If you can, choose one without ads or tracking.
2. Open it and choose it as your Home app when it asks.
3. Touch and hold an app and tap **Edit**, often a pencil.
4. Tap the icon itself, then the option to pick an image from Gallery, Photos or Files.
5. Choose the icon from **Icons-Android**, for example **chat.png**, and tap **Done**.

The words change a little between launchers. Look for Edit, then tap the icon.

SAMSUNG AND ANDROID

Icons, good to know

- If the launcher shows a different wallpaper, set ours again from inside it.
- If it puts our icons inside a shape or a white frame, look for **Icon shape** in its settings and turn it off.
- Start with the apps you use most.

Going back

Open **Settings › Apps**, then **Choose default apps** (on some phones, **Default apps**) **› Home app**, and pick the one you had. On Samsung it's **One UI Home**.

CHAPTER

Other Android phones

Pixel, Xiaomi, Motorola, OnePlus and more. Menus change a little from brand to brand.

Wallpapers

1. Open the picture in Photos or Gallery.
2. Tap ⋮, then **Use as** or **Set as wallpaper**, and choose the lock screen or the home screen.

Or touch and hold the home screen and look for **Wallpaper & style**.

A wallpaper that moves

Some phones take a video in their own wallpaper settings. Pixel phones don't. If yours doesn't, a free video wallpaper app from Google Play can play our loops: search for "video live wallpaper".

Icons and widgets

Icons

Same as on Samsung, with a launcher: page 20.

Widgets

1. Install a photo widget app from Google Play. Search for "photo widget".
2. Add its widget to your home screen in the size you want.
3. Choose a small, medium or large picture from the **Widgets** folder.

This works on Samsung too.

HELP

Quick fixes

The colours look washed out or grey

Restart your phone and set the wallpaper again. On iPhone, keep the icon style on Default. If dark mode dims your wallpaper, turn the dimming off in the wallpaper settings.

I can't find the files

Download them in a browser, not the Etsy app (page 5). Look in Files › Downloads, and unzip them first. On Android, new pictures can take a minute to show in the Gallery.

My iPhone icons have no red badges

Icons made with Shortcuts can't show them. Keep the app's own icon for apps where you need them.

HELP

More fixes

An icon opens Shortcuts for a second

That's how iPhone does it. The app opens right after.

The video doesn't move

iPhone: "Motion not available" means iOS won't animate it, so use the still picture. Low Power Mode stops it too. Samsung and Android: choose the .mp4 through Gallery, and check that battery saving isn't on. Some phones need a video wallpaper app.

The icons have a frame or look cropped

Turn off the launcher's icon shape setting.

Need help?

Message us on Etsy, from your order or from our shop. Tell us your phone model and what you see. A screenshot helps a lot.

Personal use only. Please don't share or resell these files.

Not affiliated with any app or brand. Icons are named by what they show, and the app names in this guide are only suggestions.
